Motomon's Tiny [GC-101] Quick Reference Guide

Important Operational Notes

All commands use default username & password. ("username"/"0000")

All commands have to be sent via SMS to Tiny's SIM card phone number.

GPRS service has to be activated & enabled for use with SIM cellular service provider.

Commands can be sent from any cellular phone capable of sending SMS.

GC-101 has to have a SIM card installed properly and has to be locked onto a GSM network.

It is strongly advised to test the SIM card with a regular phone before using it in the GC-101.

Always answer Panic calls, if not the call will go to voice mail and eat up your minutes on the SIM card.

Turn unit off when not needed, unit will boot up very quickly when turned on.

After SOS is acknowledged Deactivate unit in Panic Mode [#username,0000,offpanic*] or it will keep

sending Panic messages. To avoid critical communication breakdown, Always know how much data,

minutes, and sms messages you have available on your SIM card! Setting up additional Alerts and

Tracking are done from website: www.motomon.com, login.

Motomon's Tiny [GC-101] Quick Reference Guide (cont.)

Basic communication setup

Programming APN name to "wap.cingular" (AT&T US):

#username,0000,3,wap.cingular,,*

Selecting UDP communication protocol:

#username,0000,14,9*

Setting up server's IP address:

#username,0000,18,194.213.214.60:1500*

Selecting buffer operational mode to buffer X number of samples before sending them out:

#username,0000,21,2*

Setting up the required number of samples taken before sending them out. (3 samples before sending):

#username,0000,20,3*

Setting up how fast you want to collect samples (1 sample in 30s / unlimited number of samples):

#username,0000,6,30,9999*

Switching between UDP and TCP/IP protocol

TCP/IP

#username,0000,18,194.213.214.60:1400*

#username,0000,14,7*

UDP

#username,0000,18,194.213.214.60:1500*

#username,0000,14,9*
